

# DMS 261 : OB/GYN Sonography I

This course will focus on the relational and sonographic anatomy of the female pelvis. Cross-sectional anatomy and normal sonographic findings of the non-gravid pelvis will be emphasized. Included are discussions on gynecologic pathologies, reproduction, and infertility. Physiology and related laboratory and clinical findings for disease processes are highlighted related to the female pelvis. The biology of reproduction including normal and abnormal first-trimester findings are discussed.

**Credits** 3

**Prerequisites**

All previously required and concurrent courses per the academic plan or with consent of the faculty.
