

DMS 362 : OB/GYN Sonography II

This course will focus on understanding embryology, sonographic evaluation of the gravid uterus, pathophysiology, and complications during pregnancy. Placental pathologies, fetal anomalies, and fetal dating will be discussed. Students will have the opportunity to practice biometric measurements and an anatomical survey on obstetrical phantoms and a simulator during this course.

Credits 3

Prerequisites

All previously required and concurrent courses per the academic plan or with consent of the faculty.
