

BI 256 : Anatomy & Physiology II

The second of a two-course sequence, this course provides a lecture and laboratory study of the structure and function of human cells, tissues, organs, and body systems as they relate to human health and biology. The course stresses homeostatic control systems and coordinated body functions with an emphasis on the cardiovascular, lymphatic, immune, respiratory, digestive, urinary, and reproductive systems.

Discipline CR, NS, GE

Credits 4

Theory Hours 3

Lab Hours 1

Prerequisites

None.
